

Test Inputs for Bookmarked

Bookmarked is a **content-based** recommender — it only recognizes the books in its dataset ([data/books.csv](#)). This file gives you a quick, copy-pasteable sample of titles so you can test the app without opening the full dataset.

Type any 3 of the titles below into the three search boxes, or mix and match your own combinations to see how the recommendations change.

A mix across genres :

- Harry Potter and the Sorcerer's Stone
- The Hobbit
- Percy Jackson and the Lightning Thief
- The Lord of the Rings: The Fellowship of the Ring
- A Game of Thrones
- 1984
- Brave New World
- The Hunger Games
- Divergent
- Dune
- Ender's Game
- The Martian
- Pride and Prejudice
- To Kill a Mockingbird
- The Great Gatsby
- Gone Girl
- The Girl with the Dragon Tattoo
- And Then There Were None
- The Fault in Our Stars
- The Notebook
- Sapiens: A Brief History of Humankind
- Atomic Habits
- The Book Thief
- The Kite Runner

Ready-made test combos :

(just paste all 3 into the boxes)

Fantasy quest lovers

- Harry Potter and the Sorcerer's Stone
- The Hobbit
- Percy Jackson and the Lightning Thief

Dystopian / rebellion fans

- 1984
- Brave New World
- The Hunger Games

Space & science fiction

- Dune
- Ender's Game
- The Martian

Classic literature

- Pride and Prejudice
- To Kill a Mockingbird
- The Great Gatsby

Psychological thrillers & mysteries

- Gone Girl
- The Girl with the Dragon Tattoo
- And Then There Were None

Cross-genre mix

- The Hobbit
- 1984
- The Martian

Edge cases :

- **Typos** — try `hary poter`, `the hobit`, `percy jakson`. These should still resolve correctly to the real titles.
- **Unknown book** — try a title that isn't in the dataset (e.g. `Twilight`) alongside two known ones. It falls back to using your raw text as a loose preference signal, which is weaker than a real match.
- **Total nonsense** — try `asdf qwerty zzz` for all three boxes. This should return a graceful "no suitable recommendations" message instead of a fake result.

The full list of all ~70 titles lives in `data/books.csv` if you want to go beyond this sample.
